Quick Guide

| Loading and preprocessing of data. | 1 |
|---|----|
| Preprocessing results. | 7 |
| Topic modeling. | 10 |
| Viewing the results obtained and uploading to an external file. | 12 |
| Saving calculation results as a project: | 13 |

1. Loading and preprocessing of data.

Run **TopicMiner.exe** file (in TopicMiner directory). Press the button with a file icon to load textual data.

| 😍 TopicMiner Sentiment analy | sis ver. 85 (64 bit) LINI | S laboratory, HSE | 1 | | | _ = × |

| STEP 2.2. Extr | | | | | | | |
| File for clear | Этот компьютер | | | | | | |
| Output file (r | | | | | | | |
| Search in l | 1 | | | | | | |
| List of word | Сеть | | | | | | |
| | | | | | | • | |
| 1 | | <u>И</u> мя файла: | 20topicnews | | • | <u>О</u> ткрыть | Lang: Russian I 💌 |
| 2 | | <u>Т</u> ип файлов: | MS Excel files (CSV) | | - | Отмена | Run process |
| | | | | | | |) |
| | | | | | | | |
| Status: | | F | ile name: | | | 0% | |

For example, open a CSV file (see picture).

Next, you need to specify the file to store the lemmatization results.

For example, **C:\SAGE\20topicnews_lem.tmlda**. Next, you need to specify text encoding (in this version, two options are implemented). Select **ANSI**.

| Result file (binary); C:\SAGE\20topicnews_lem.tmlda | |
|--|----------|
| Parameters for stemming: -c -wl -e utf-8 Lang: English - | Codepage |
| File with trash data: C:\SAGE\trash_data.txt | UTF |
| | UTF |
| STEP 2.1. CSV and/or TMDLA-files merging | ANSI |
| | |

You also need to specify the language (Russian and English are implemented in this version). Select **English**.

Lastly, you need to specify a file that contains some trash words/entities, which can also be deleted. See **trash_data.txt** file for an example of such a file.

| STEP 1. Assembling, deleting I | HTML tags and Lemmatisation | | |
|--------------------------------|-----------------------------|---|----------|
| File with texts and meta: | C:\SAGE\20topicnews.csv | | |
| Folder with original text fi | 691 | 1 | |
| Result file (binary); C:\SA | GE\20topicnews_lem.tmlda | D | |
| Parameters for stemming: | -c -wl Lang: English | • | Codepage |
| File with trash data: C:\SA | AGE \trash_data.txt | | ANSI - |

As a result, when everything you need is filled in, click on the red button.

You will start the process of lemmatization (see the percentage of completion at the bottom of the screen). As a result, you will have a file containing the original and lemmatized texts. When the first stage of preprocessing (lemmatization procedure) is over, you will see the following message in the status bar.

| Status: Lematization is finished (0:03:10) | File name: test1.tmlda | 0% |
|--|------------------------|----|
| | | |

The time of lemmatization is also indicated there.

| Lematization (Russian language) View of TMLDA file Gib | obs LDA sampling BigARTM H | lierarchical Dirichlet Process Kullback-Leibler Distance, Jaccard index |
|---|----------------------------|---|
| STEP 1. Assembling, deleting HTML tags and Lemmatisatio | n | 2.3 Distribution of word frequency in whole collection |
| File with texts and meta: C:\SAGE\20topicnews.csv | | Number of unic words: 0 |
| Folder with original text files: | 2 | Total word number: 0 |
| Result file (binary): C:\SAGE\20topicnews_lem.tmlda | | Low bound Upper bound Filtration |
| Parameters for stemming: -c -wl Lang: | English - | |
| File with trash data: C:\SAGE\trash_data.txt | ANSI - | STEP 3. Removing stop words |
| | | File for clearing (binary) |
| STEP 2.1. CSV and/or TMDLA-riles merging | | Duiput file (binary) |
| (CSV or binary): | Merge | |
| Besult file Information | | Number of stop words: D |
| | | |
| STEP 2.2. Extraction words form brackets and calculating File for electric phiparule | word frequency | |
| Intent file feeting (energy) | | |
| | | |
| Search in list of words: no | | |
| List of words | | d Dauglaning continent binam disting any |
| | | Input file: |
| 2 | CSV | Bresult file: Bun process |
| | | |
| | | |
| Status: Lematization 0:00:07 | Execution: 10% | 10% |

At the second stage, you need to specify C:\SAGE\20topicnews_lem.tmlda as the input file, and C:\SAGE\20topicnews_lem2.tmlda as the output (it is optional). Then press the yellow button.

| STEP 2.2. Extraction words form brackets and calculating word frequency | |
|---|--|
| File for clearing (binary): C:\SAGE\20topicnews_lem.tmlda | |
| Output file (optional): C:\SAGE\20topicnews_lem2.tmlda | |
| Search in list of words: no | |

The process of the second stage (in percentage) is also visualized. A word list with frequencies will also appear. This list can be saved by pressing "CSV" button. This option is useful to form a list of stop words. For example, you can select the most frequent words as a list of stop words and put a filter that will save these words to a test file.

| STEP 2.2. Extraction words form brackets and calculating word frequency | | | | | | | | |
|---|--|------|---------|--|-----|--|--|--|
| File for clearing (binary): C:\SAGE\20topicnews_lem.tmlda | | | | | | | | |
| Output file | Output file (optional): C:\SAGE\20topicnews_lem2.tmlda | | | | | | | |
| Search in List of wor | Search in list of words: no | | | | | | | |
| | Word | Freq | TF-IDF | | | | | |
| 1 | us | 479 | 0,03530 | | | | | |
| 2 | your | 339 | 0,03986 | | CSV | | | |
| 3 | articl | 312 | 0,02501 | | | | | |
| 4 | m | 295 | 0,03728 | | | | | |
| - | 1. | 005 | 0.00754 | | | | | |

For example, in this case, let's take **256** as the upper bound.

| 2.3 Distribution of word frequency in whole collection | | | | | | | |
|--|----------------------------------|--|--|--|--|--|--|
| Number of unic word | ls: 9960 | | | | | | |
| Total word number: | 691.02 | | | | | | |
| Low bound 0 | Upper bound 256 Filtration | | | | | | |

Next, click on the "filtration" button and specify the file in which the words that lie outside the specified range will be saved (that is, everything that is above the frequency of **1258**). If you open such a file, you will see a list of stop words (most frequent).

| Lematization (Rus | sian language) View o | f TMLDA file 🗍 Gibbs L | DA sampling BigARTM H | lierarchical Dirichlet I | Process Kullback-Leibler D | Distance, Jaccard index |

| 2 | | Тип файлов: | Topic Miner LDA files (*.txt) | | • Отмена | Run process |
| | | | | | | |
| | | | | | | |
| Status: | | File | e name: | | 0% | |

At the last stage of preprocessing. You need to point to the input file C:\SAGE\20topicnews_lem2.tmlda, and the output to C:\SAGE\20topicnews_lem3.tmlda. And also download a file with a list of stop words.

Now press the green button.

2. Preprocessing results.

If you need to see what you have learned (and also to start filtering texts), then you need to go to the next tab. To observe the results, use the following button:

Specify C:\SAGE\20topicnews_lem3.tmlda file.

| Lematization (Russian la | nguage) View of TMLDA file | Gibbs LDA sampling BigARTM Hierar | rchical Dirichlet Pro | ocess Kullback | -Leibler Distance, Jaccard index |

The first column is the original data, the second column is the lemmatized data. The third and subsequent columns are metadata.

As a result of preprocessing, empty documents can be obtained (for example, due to unspecified line ends or words in the texts were deleted using stop words). Of course, such documents must be removed from the collection. This can be done using filtering.

For example, let's delete short documents that contain only one word (**00000**):

| Document ID | Original document | Lematized document | Author | Field 1 |
|-------------|---|--|--------|---------|
| 445 | pierson enet dec dave pierson swr meter cb article peter m insane apana org au peter tryndoch allthe devil meter cb | pierson enet dec dave pierson swr meter cb articl peter m insan apana org au peter tryndoch allth devil meter cb radio | 446 | |

| 453 | mnhcc cunyvm bitnet marty helgesen public private revelation formerly question virgin ashley account private | mnhcc cunyvm bitnet marti helgesen public privat revel formerli question virgin ashlei account privat revel doe some | 454 | |

To do this, we will indicate the number of words:

| Words count: | 1 |
|------------------|------|
| Exclude short of | locs |

And click on **Exclude short docs** button. As a result, **20topicnews_lem3_we.tmlda** file will be created, which will no longer contain these documents.

3. Topic modeling.

In order to start thematic modeling, for example, based on Gibbs sampling (Monte Carlo method), you need to go to another tab:

| 📚 TopicMiner Sentiment analysis ver. 2010 (64 bit) LIN | IS laboratory, HSE (Registered |) | _ = X |
|---|--------------------------------|--|--|
| Lematization (Russian language) View of TMLDA file Gib | bs LDA sampling BigARTM H | lierarchical Dirichlet Process | Kullback-Leibler Distance, Jaccard index |
| 🖸 - 🖸 🔲 🎹 | Q 🔍 🛃 🗄 | 🜲 📂 🔘 | |
| Parameters of simulation Number of iterations: 100 Save step: Topics: Alpha: Beta: Start value: 40 0.5 0.1 | 10 Calcul Ma | ation parameters OME: Number of threads: athod: LDA 💌 | 8 🗘 |
| Multiple topics simulation: End value: 200 0,5 0,1 Step: 10 0,1 0,1 Template file for results: | Senti Ser Numb Numb | ment diet: ve NW and NWSUM arrays der of documents: 0 der of words in documents | z 0 |
| | 0 Iteration | | |
| Status: | File name: | | 0% |

You need to load the file after preprocessing and removing empty documents.

For example, load the file C:\SAGE\20topicnews_lem3_we.tmlda. Ignore the download percentage (in the current version, this is just a measure of the length of the collection).

Next, specify the parameters of the model (number of topics, number of iterations, the rendering step, and *alpha*, *beta* parameters). This can be done as shown in the picture.

| 🖸 - 🖸 🔲 🔽 🔍 🚽 | ╊ 📮 🃂 🔘 |
|---|---|
| Parameters of simulation Number of iterations: 200 Save step: 10 | Calculation parameters OMP Number of threads: |
| Lopies: Alpha: Bata: Start value: 40 0, 0,1 | Method: LDA Fix topics |
| Multiple topics simulation: | Sentiment dist: |
| End value: 200 0,5 0,1 | Save NW and NWSHM arrays |
| Step: 10 0,1 0,1 | Number of documents: 1012 |
| Template file for results: | Number of words in documents: 19109 |

And you need to choose a model, for example, **LDA**.

Then click on the button:

The modeling progress will be displayed on the graph:

The blue line is the percentage of words with high probability. It can be seen from the graph that after 100 iterations, the percentage of words stops changing, which means a further increase in iterations does not need to be done. The green line is the percentage of high probability documents.

4. Viewing the results obtained and uploading to an external file.

To see the already sorted calculation results, you need to click on the button:

As a result, you will see the following picture:

| 1 | | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | |

Each cell contains the document ID and its probability in the topic (that is, in the column). To view the contents of a document (original non-lematized text), just place the mouse cursor onto the cell.

5. Saving calculation results as a project:

The calculation results can be saved as a project. The next time, this project can be opened in TopicMiner and you can continue working with it. To save the project, you need to use the following button:

And to open the project use the following button:
